## Getting started

Before I started to design my personal website, I visited a lots of student's website and different sample of website of CV so that I could collect some knowledge about how to design my own website. During my research I focused mainly on their design along with their HTML codes. Only with the help from other sites I was finally able to develop my own website.

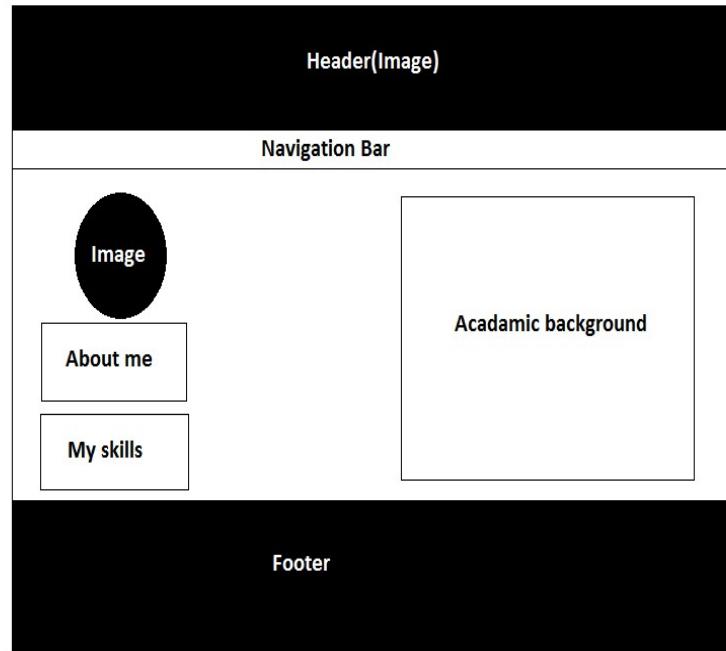

## Design of my website

### Wireframe of my website

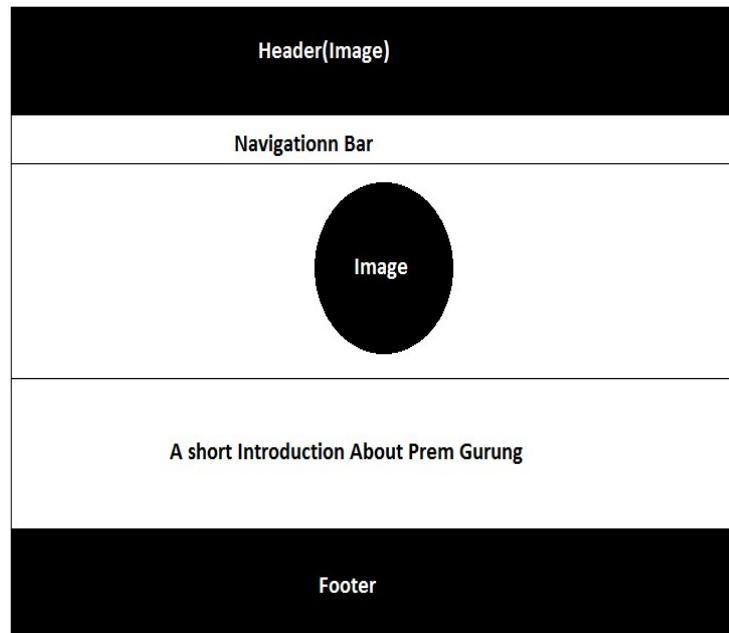

This is my wireframe for my Homepage.

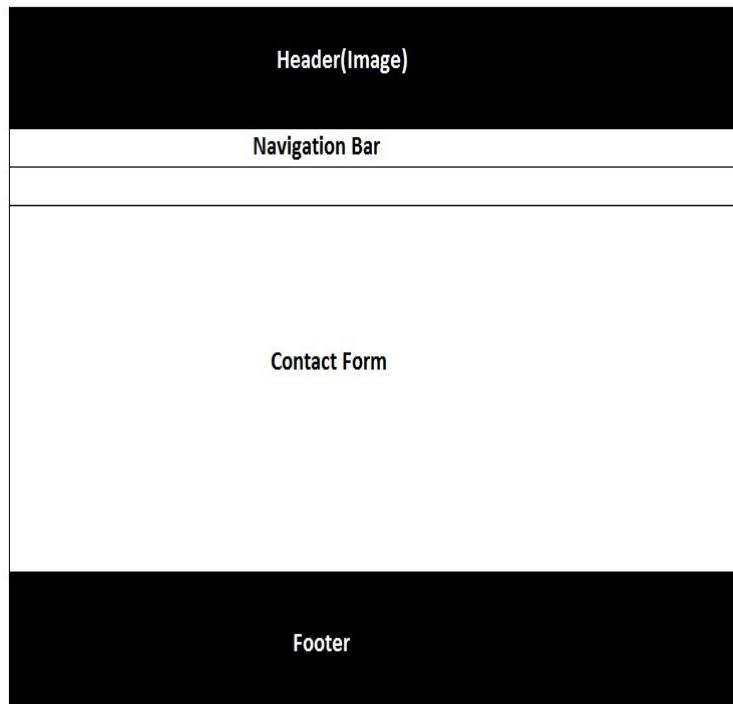

This is my wireframe for my CV page.

This is my wireframe for my Biography page.

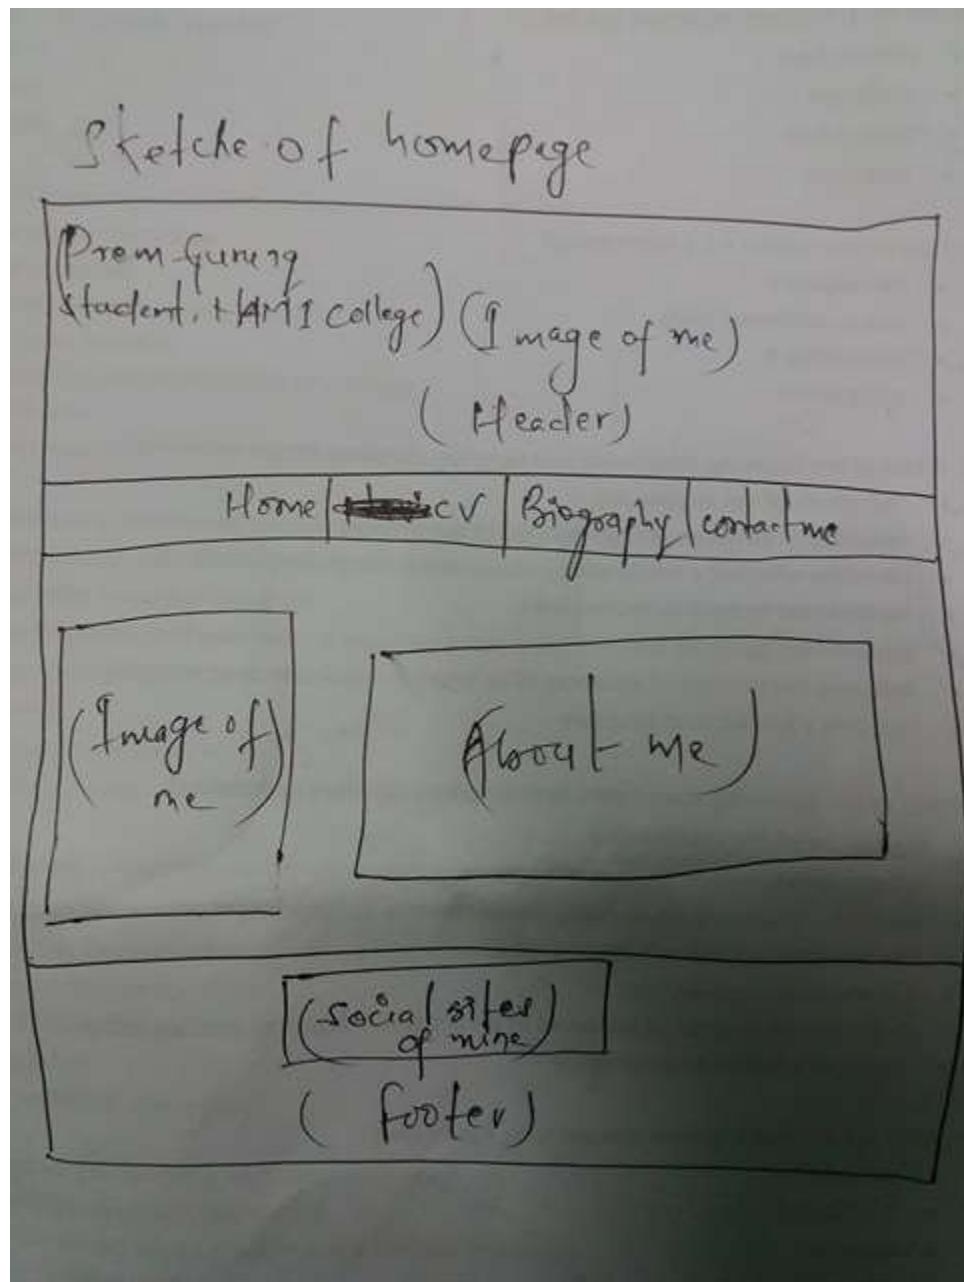

This is my wireframe for my Contact page.

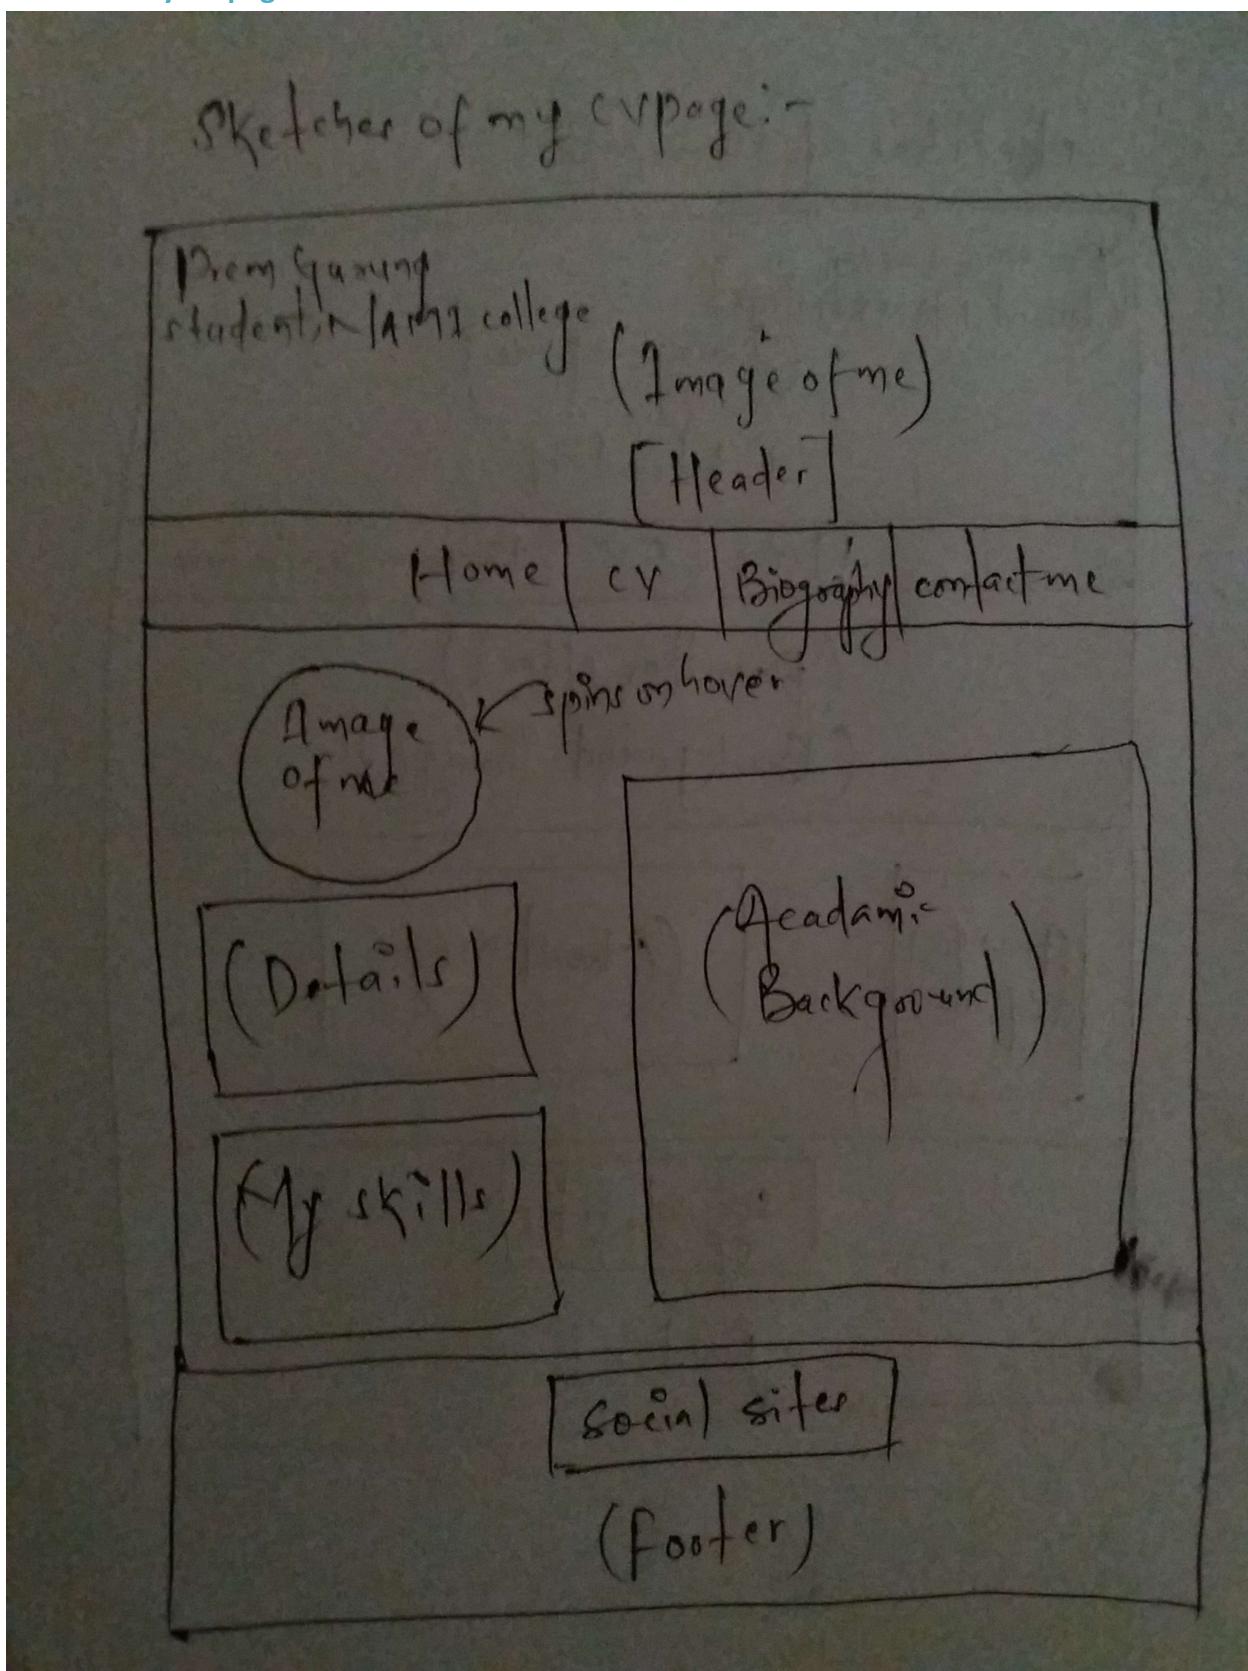

## Sketches

After my research on different samples of website, I finally drew the wireframes for my personal website. And then, I drew the sketches of different pages of my website. Sketches make the whole purpose of designing website easy and simple. Sketches help me to find out what style and design would be appropriate for my website. The sketches of my webpages are shown below:

## Sketch of my Homepage.

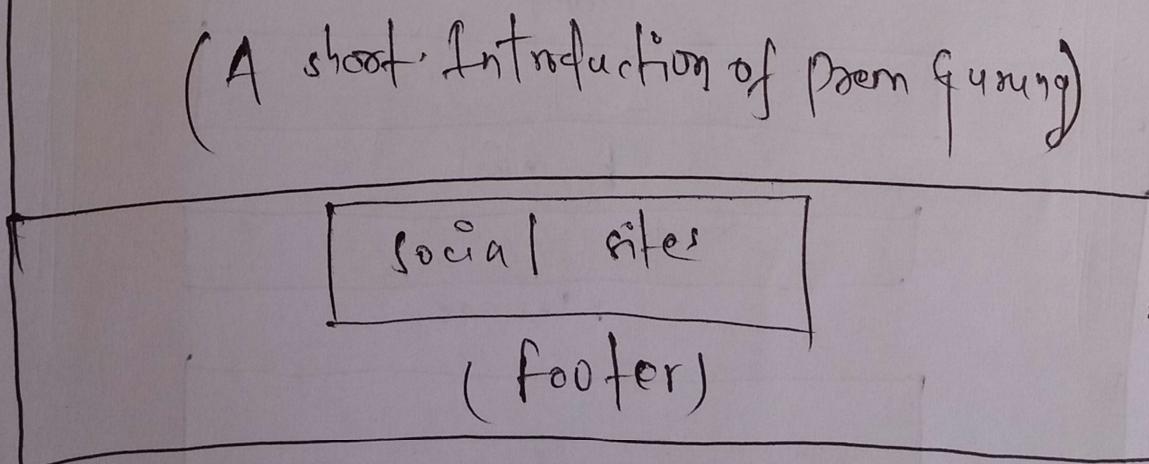

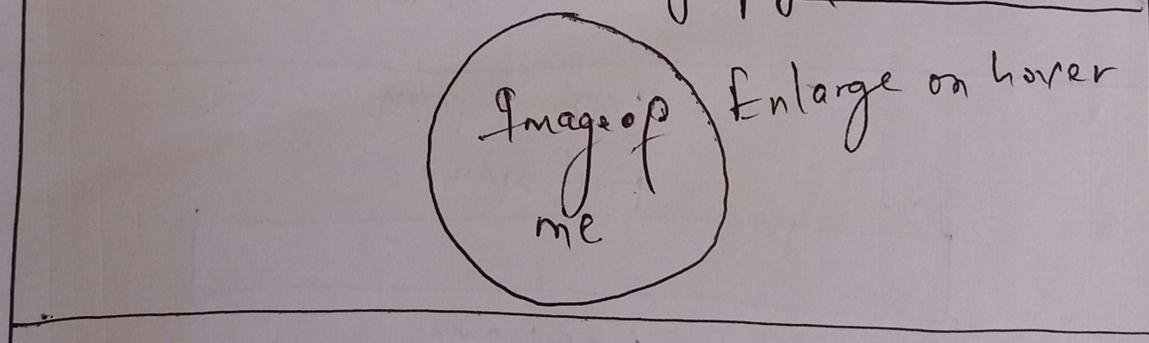

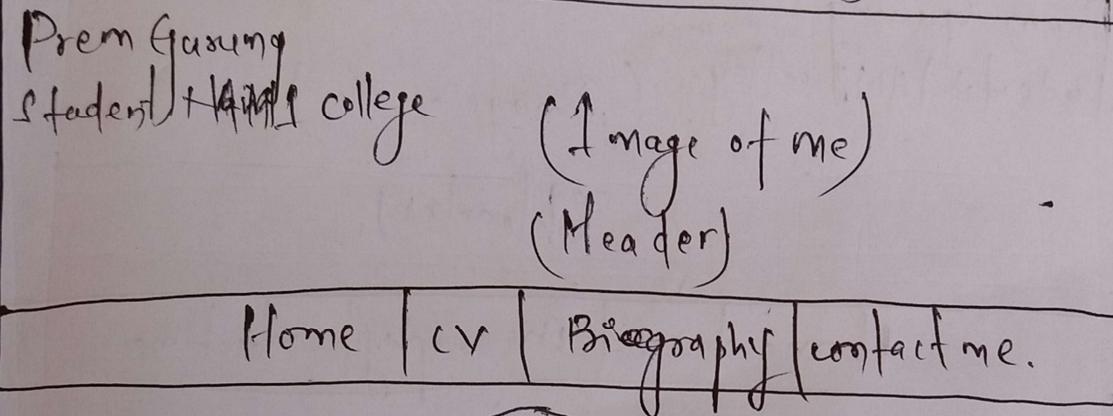

Sketch of my CV page.

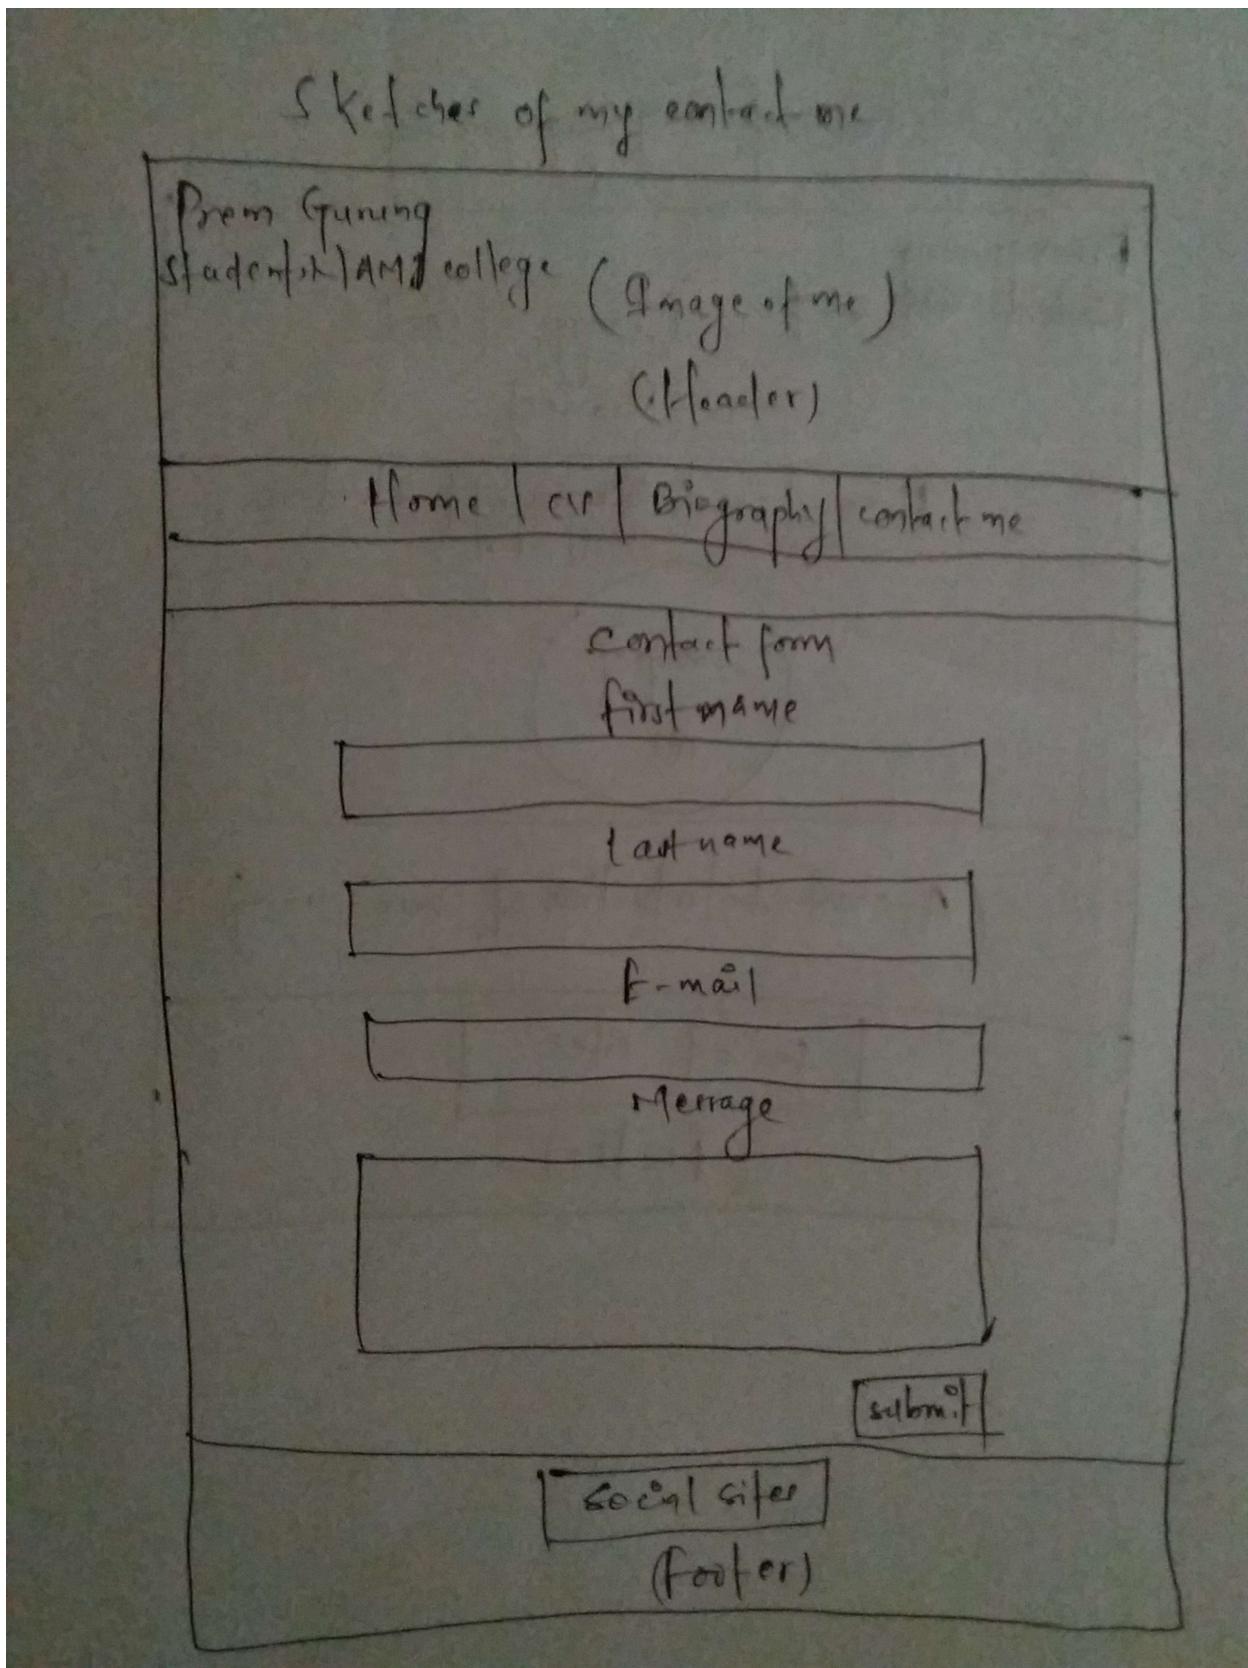

Sketch of my Biography page.

Sketcher of my Biography page.

Sketch of my Contact page.

## Models of Good Practice

### Navigation

Among the models of good practice, navigation system is one of the prime model of good practice which lead you to my different four pages of my website. I had designed my navigation bar below the header part which will easily direct you around my website. There are four bottoms on my navigation bar i.e. HOME, CV, BIOGRAPHY and CONTACT ME which navigate you to my homepage, cv page, biography page and contact page respectively. Also you can easily return to the home page without following back steps by clicking the bottom of which page you want to visit.

### Responsive Website

As this is the age where people want comfortable and luxurious life, people mostly use mobile phones rather than laptops and PCs. They find mobile phones portable and easy to use. So, considering this present situation I had designed my website responsive in mobile too. You can easily visit my website in mobile with no obstacles.

### Page Load Speed

Speed page loading is also important model of good practice. So, to check the speed of my website, I have tested my website in pingdom.com and got the results which is shown below describing that my website is faster than 98% of the tested websites.

Summary

Performance grade ?

**B** 88

Load time

419 ms

Faster than

98 %  
of tested sites

Page size

1.0 MB

Requests

9

Tested from

Dallas  
on Apr 8 at 04:19

pingdom

## Google Font

Using google fonts is also one of the models of good practice. Websites using google fonts looks so attractive. And in my website I used the below shown google font on my heading in header part.

---

Lobster  
Impallari Type (1 style) 

*The spectacle before  
us was indeed  
sublime.*

## Validation

After designing website, everyone wants to test their website and try to find whether there is error or not in their codes. Thus, I tested my HTML codes and CSS codes in <https://validator.w3.org> and <https://jigsaw.w3.org/css-validator> respectively and got the results which is shown below.

## Nu Html Checker

This tool is an ongoing experiment in better HTML checking, and its behavior remains subject to change

### Showing results for uploaded file index.html

Checker Input:

Show  source  outline  image report

Check by   No file chosen

Uploaded files with .xhtml or .xht extensions are parsed using the XML parser.

Document checking completed. No errors or warnings to show.

Used the HTML parser.

Total execution time 10 milliseconds.

The W3C CSS Validation Service

W3C CSS Validator results for contact.css (CSS level 3)

Jump to: [Validated CSS](#)

W3C CSS Validator results for contact.css (CSS level 3)

Congratulations! No Error Found.

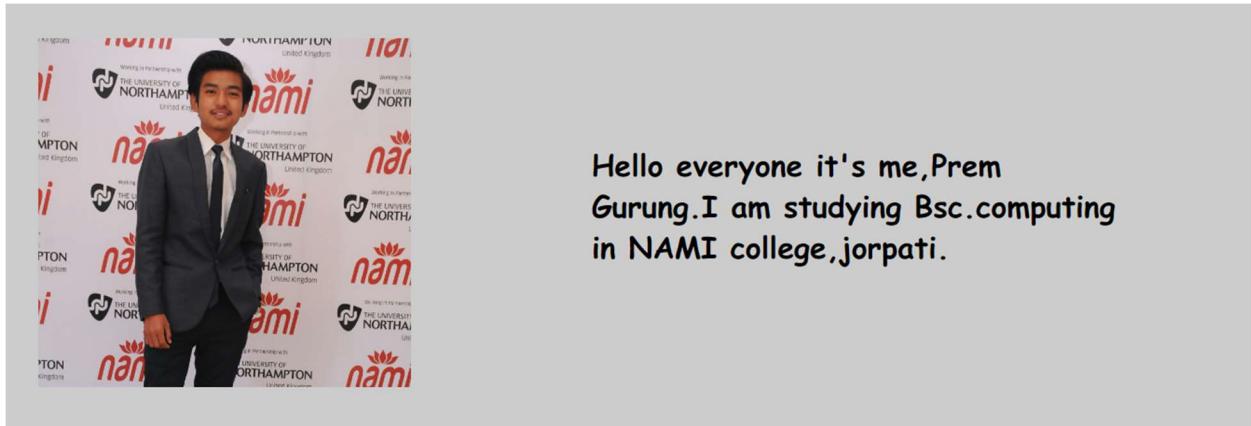

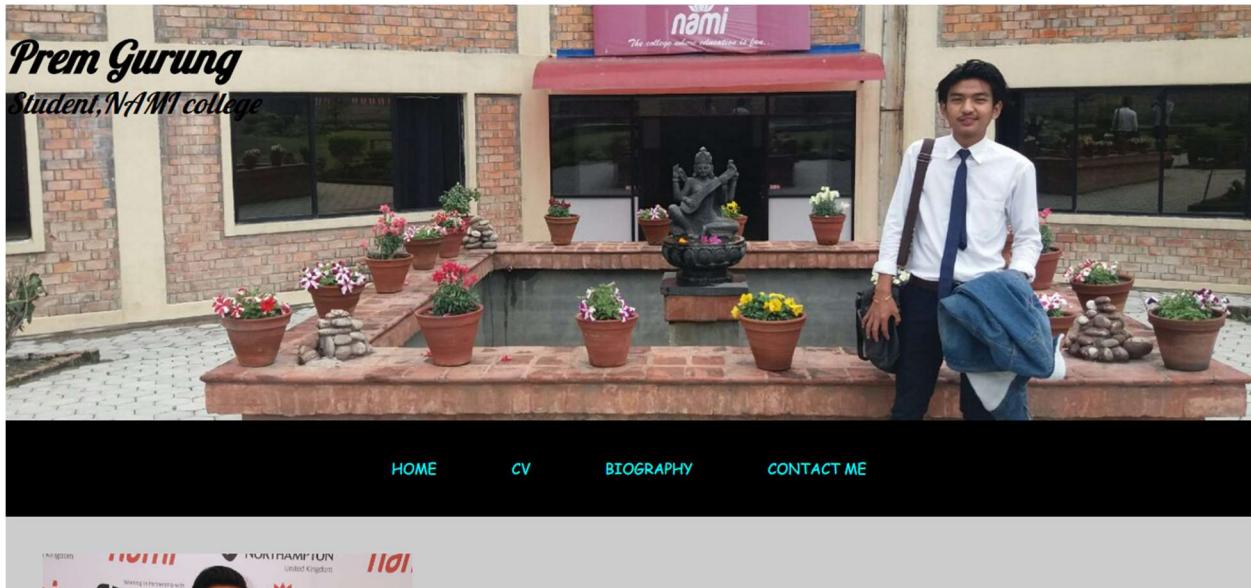

This document validates as [CSS level 3](#)!

To show your readers that you've taken the care to create an interoperable Web page, you may display this icon on any page that validates. Here is the XHTML you could use to add this icon to your Web page:

## Final Design

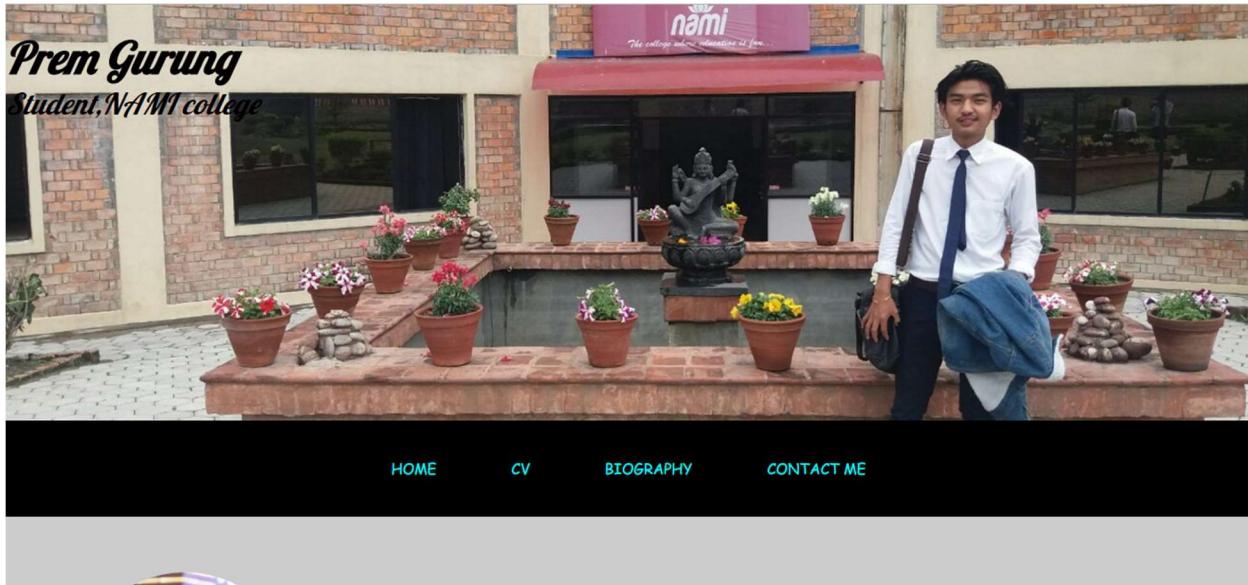

### Final Design of my Homepage.

I made my homepage so simple so that you can visit my website easily. My homepage has header part, navigation part, middle section and footer part. The header part of my website contains background image of mine and text on it as a heading. Similarly, the navigation bar contains four bottoms that directs you to different pages of my website. The color of the bottoms changes into blue and its border-bottom into yellow color on hover. Like this, the middle section contains my photo and a little detail about me. And the footer part contains links to my social sites.

## Final Design of my CV page

The CV page of website has also four part. Among them the header part, navigation part and the footer part have the same features on all webpages. But the middle section of my CV page contains a photo of me in circle that rotates 360 degrees on hover. Similarly, this section contains details about me and my skills below my photo. Like this, there is academic background on the right side of this section.

## ACADEMIC BACKGROUND

**ABOUT ME**

NAME: Prem Gurung  
ADDRESS: Morang,Nepal  
EMAIL: grngbpn@gmail.com  
PHONE: 9815993465

**My Skills**

HTML 90%

CSS 40%

Talking about my academic background, I passed my School Leaving Certificate (SLC) with 78.75% in the year 2014 A.D. from Bal Niketan English School. After completing my SLC, I joined Vishwa Adarsha Higher Secondary School for my 10+2 science studies. I took Physics as my major and studied Chemistry, Mathematics, Computer Science and English as well. I was able to obtain 62.8% and 65.2% in grade 11 and 12 respectively. In aggregate, I secured 64% in my 10+2 level in 2016. After the completion of high school, I planned to study computing in my bachelor. Then I started to visit lots of college where the course of computing is available. After my research, I decided to join NAMI college which is located in Jorpati, Kathmandu. And now I'm studying Bsc.computing(hons) in NAMI college.

## Final Design of my Biography page.

Like my homepage, my biography page is also simple and easy to understand. In the middle section of my biography page, there is a photo of me in the top center in circular form which enlarges on hover. And right below of the photo, there is a short introduction about me i.e. bio.

A screenshot of a biography page. At the top left, it says "Prem Gurung" and "Student, NAMI college". The main feature is a large circular photo of a man (Prem Gurung) standing outdoors in front of a building with a red awning and a statue. Below the photo is a short bio: "I am Prem Gurung, a student of NAMI college. I am currently pursuing my degree in Computer Science Engineering. I am a hardworking and dedicated student, always striving to improve myself and contribute to my community. I am also involved in various extracurricular activities and volunteer work. My goal is to become a successful software developer and make a positive impact in the tech industry." At the bottom of the page is a navigation bar with links: "HOME", "CV", "BIOGRAPHY", and "CONTACT ME".

### A SHORT INTRODUCTION OF PREM GURUNG

Prem gurung was born on 3rd september 1998 in Letang, Morang. His father name is Hari Gurung and mother name is Sebika gurung. Also he has a sister, grandfather and grandmother in his family. He is a very helpful and honest person. At present, he is living in kathmandu for his academic purpose. Taking about his favourite things, he loves to play football and loves riding bike. Also he loves to eat, drinks and enjoy with his friends. He prefer to study books in his free time and play games with his freinds.

### Final Design of my Contact page.

This page is the simplest and smallest page of my website. As you can see, there is just a contact form in the middle section of my website. There is four box that the visitors should fill up to contact me. The border-bottom of each box has black color that makes it look little attractive.

HOME      CV      BIOGRAPHY      CONTACT ME

CONTACT FORM  
FIRST NAME:

DROP YOUR MESSAGE HERE

## Conclusion

After my research and visit of different samples of websites, I finally designed my simple personal website in 4-5 weeks. While designing my website I looked out different HTML codes and CSS codes in [www.w3school.com](http://www.w3school.com). Also I took help from my friends and teachers while designing my website. As this was the first step of my webpage designing, it has helped me building knowledge and ideas about design, styles and so many things. In conclusion, I had designed my personal website as per the given requirements.
